employed by computational packages and practical examples of their use.

MS Aerospace and Mechanical Engineering - Computational ...

Computational fluid dynamics is a branch of fluid mechanics that uses numerical analysis and data structures to analyze and solve problems that involve fluid flows. Computers are used to perform the calculations required to simulate the free-stream flow of the fluid, and the interaction of the fluid with surfaces defined by boundary conditions. With high-speed supercomputers, better solutions

The basic idea used in this technique also provides a useful method of viewing stability for systems of equations. Systems of equations encountered in fluid mechanics and heat transfer can often be written in the form $-d+E- = odF$ (3.113) $dt dx$ where E and F are vectors and $F = F(E)$.

Holtec provides engineering services in the area of thermodynamics, heat transfer, and fluid mechanics applied in the design and engineering of heat transfer equipment and spent fuel storage systems for nuclear power plants. Activities include accident and safety analysis, system transients, system simulation for performance evaluation, steam cycle analysis and optimization, and computational fluid dynamics (CFD).
