Industrial HVLS Fans A quiet environment and high efficiency operation is essential in many fan applications. Driving the fan blades directly with an MI-F torque motor instead of an induction motor

Frameless High Torque Motors - Magnetic Innovations

A direct drive torque motor is a permanent-magnet synchronous motor (PMSM). Hence, the load is directly driven without the use of a gearbox or transmission. This reduces the number of moving parts, and thereby increases the operational lifetime and efficiency of the application. Compared to induction motors with the same volume/weight, the peak point energy efficiency of frameless high torque motors is much higher.

Direct Drive Torque Motor | Magnetic Innovation B.V.

The high torque frameless motors consist of two parts. The armature assembly (stator) with windings and the rotor assembly carrying the magnets that produce torque integrated into a customer specific application. A great advantage is the freedom in design and choice of bearings, shaft, housing and sensors that are required for the application.

FMI motors—Rozum Robotics ' own R&D products—are synchronous alternating-current frameless actuators featuring superior torque density. The brushless technology employed in the drives enables packing impressive power into a compact footprint, while minimizing friction-induced power losses and ensuring noise- and spark-free operation.

Frameless Motor | Rozum Robotics

Frameless torque motors consist of a separate rotor and stator which are assembled directly inside the machine. The result is a compact, fully-integrated motor with improved dynamic performance. The rotor and stator can be modified to match your machine and the motor winding can be customized to adapt the motor speed to the application.
