Henrietta Lacks, but
scientists know her as HeLa.
She was a poor Southern
tobacco farmer who worked

the same land as her slave
ancestors, yet her
cells—taken without her
knowledge—became one of the
most important tools in
medicine: The first
“immortal” human cells grown
in culture, which are still
alive today, though she has
been dead for more than
sixty years. HeLa cells were
vital for developing the
polio vaccine; uncovered
secrets of cancer, viruses,
and the atom bomb’s effects;
helped lead to important
advances like in vitro
fertilization, cloning, and
gene mapping; and have been
bought and sold by the
billions. Yet Henrietta
Lacks remains virtually

unknown, buried in an unmarked grave. Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the

birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the

scientific discovery, as
well as its human
consequences.

Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters. Technology matters, writes David Nye, because it is inseparable from being human. We have used tools for more than 100,000 years, and their central purpose has not always been to provide necessities. People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old

tasks. Perhaps this is because we are intimate with devices and machines from an early age—as children, we play with technological toys: trucks, cars, stoves, telephones, model railroads, Playstations. Through these machines we imagine ourselves into a creative relationship with the world. As adults, we retain this technological playfulness with gadgets and appliances—Blackberries, cell phones, GPS navigation systems in our cars. We use technology to shape our world, yet we think little about the choices we are making. In *Technology Matters*, Nye tackles ten

Download Ebook Harley Davidson Road Tech

Central questions about our relationship to technology, integrating a half-century of ideas about technology into ten cogent and concise chapters, with wide-ranging historical examples from many societies. He asks: Can we define technology? Does technology shape us, or do we shape it? Is technology inevitable or unpredictable? (Why do experts often fail to get it right?)? How do historians understand it? Are we using modern technology to create cultural uniformity, or diversity? To create abundance, or an ecological crisis? To destroy jobs or create new opportunities?

Download Ebook Harley Davidson Road Tech

Should "the market" choose our technologies? Do advanced technologies make us more secure, or escalate dangers? Does ubiquitous technology expand our mental horizons, or encapsulate us in artifice? These large questions may have no final answers yet, but we need to wrestle with them—to live them, so that we may, as Rilke puts it, "live along some distant day into the answers."

This "fascinating" story of a nineteenth-century mystery "should appeal to most lovers of history, as well

as to bicycling enthusiasts.

Strongly recommended"

(Library Journal). In the late 1880s, Frank Lenz of Pittsburgh, a renowned high-wheel racer and long-distance tourist, dreamed of cycling around the world. He finally got his chance by recasting himself as a champion of the downsized "safety-bicycle" with inflatable tires, the forerunner of the modern road bike that was about to become wildly popular. In the spring of 1892 he quit his accounting job and gamely set out west to cover twenty thousand miles over three continents as a correspondent for *Outing*

magazine. Two years later, after having survived countless near disasters and unimaginable hardships, he approached Europe for the final leg. Lenz never made it. His mysterious disappearance in eastern Turkey sparked an international outcry and compelled Outing to send William Sachtleben, another larger-than-life cyclist, on Lenz's trail. Bringing to light a wealth of information, David Herlihy's gripping narrative captures the soaring joys and constant dangers accompanying the bicycle adventurer in the days before paved roads and

automobiles. This untold story culminates with Sachtleben's heroic effort to bring Lenz's accused murderers to justice, even as troubled Turkey teetered on the edge of collapse.

Featuring a new introduction by Robert Hass, the nine captivatingly meditative essays in *The Practice of the Wild* display the deep understanding and wide erudition of Gary Snyder in the ways of Buddhist belief, wildness, wildlife, and the world. These essays, first published in 1990, stand as the mature centerpiece of Snyder's work and thought, and this profound collection is widely accepted as one of the central texts on wilderness and the interaction of nature and culture.
