Introduction To Water Supply Systems

Water supplies may be obtained from surface or ground sources, by expansion of existing systems, or by purchase from other systems. The selection of a source of supply will be based on water availability, adequacy, quality, cost of development and operation and the expected life of the project to be served.

The following steps can be used to pre-select potential water supply options:

1. Identify water sources which are available and accessible
2. Identify system templates which include and address these water sources
3. For each template, select a technology from each functional group out of boxes with multiple technologies.

Introduction to Water Supply Systems | PDH Library
Introduction to general design of domestic service water supply systems - with pressurized or gravity tanks. The purpose with a domestic service water supply system is to provide consumers with enough hot and cold water. In old buildings it is common with gravity storage tanks on the top floor of the building.

of community water supply systems; transient, non-community water supply systems; and non-transient, non-community water supply systems. A community water supply system serves year-round residents and ranges in size from those that serve as few as 25 people to those that serve several million. A transient, non-community water supply system serves areas such as campgrounds or gas stations where people do not remain for long periods of time.

The water supply system may be: 1 a handpump raising groundwater from a borehole or dug well; 2 a standpost and tap connected to a pipe system (which may be supplied by motorized pumping or by gravity, from a borehole, stream, reservoir, or spring source, with or without any water treatment); systems may consist of only a

Chapter 1

As with all other elements of emergency management, water supplies can be designed and maintained in ways that help to reduce the health impacts of disasters.

It is useful to distinguish between large-scale, formal water-supply systems (e.g. urban water-supply systems) and small-scale, scattered supplies.

7. Water supply - WHO

Water supply is the provision of water by public utilities, commercial organisations, community endeavors or by individuals, usually via a system of pumps and pipes. See also: Irrigation, the practice and systems of water supply on a larger scale, for a wider variety of purposes, primarily agriculture.
