The Home Modification Occupational Therapy Alliance (HMOTA) is a group of occupational therapists who are building home modification businesses. Our members have businesses at all stages from conception to up, running and rocking. The goals of this group are to: Promote occupational therapists as leaders in the home modification field.

Occupational therapists require skills to access the daily living skills of their clients. This book uses a transactional approach to examine the home environment and the client. Current and future needs are assessed and this book addresses concerns and suggests solutions which will assist in helping the client remain in their own home.

"In this book, we use a transactional approach to examine the person-occupation-environment interaction and provide therapists with a detailed understanding of the various dimensions of the home environment that impact on home modification decisions. We also examine the context of home modification services and the impact of various demographic, legislative, policy, and service delivery traditions on the development and delivery of home modification services. In particular, we explore the roles and perspectives of each stakeholder in the home modification process, and we present a range of strategies to assist occupational therapists to achieve effective and positive service delivery outcomes. Additionally, we review the current legislative environment and the funding schemes that facilitate service delivery. We examine, in detail, the home modification process, including a review of approaches to evaluating, measuring, and drawing the environment; identifying and evaluating interventions; applying design standards; and reporting and legal issues. To assist the reader in identifying bases for evidence-based practice and topics for future research and theory development, we provide an overview of the literature on evaluating home modification outcomes and review the evidence for home modification interventions. The book concludes with a series of case studies that highlight the application of the home modification process in developing effective solutions for a range of client groups"--

Participation in meaningful activities in the home and community contributes to health, wellness, and good quality of life. One way in which occupational therapy supports that participation is by advocating for increased accessibility through universal design and environmental modification. Occupational therapy professionals fill a unique role in environmental modification through evaluation, intervention, and outcomes measurement by facilitating the creation of safe, accessible homes that allow people to do what is important and relevant to them. Chapters, written by occupational therapy professionals as well as policymakers, researchers, designers, and builders, articulate the meaning of home to clients, define universal design, offer assessments and outcomes measurements, delineate collaborative roles, discuss funding options, and provide networking and marketing guidance.

Forlagets beskrivelse: Too often, older or disabled people live limited lives or give up their homes and neighborhoods prematurely because standard housing cannot meet their needs. Home modifications - or alterations, adjustments, or additions - to a home can help older or disabled people age in place and stay in their communities, which is often their preference. Occupational therapy plays a significant role in assessing needs, identifying and training in solutions, and evaluating outcomes in home modifications. This Practice Guideline serves as a reference for occupational therapists and occupational therapy assistants, as well as for designers, builders, social services providers, health care facility managers, managed care organizations, and health care regulators. It defines the contribution that occupational therapy can make to the home modification process through evaluation, consultation, and training with clients or consumers who need home modifications.

Presenting the new edition of the text that delivers the most widely-used and developed conceptual model in occupational therapy. Beautifully redesigned and fully revised, the Third Edition of A Model of Human Occupation (MOHO) delivers the latest in human occupation research and application to practice. New to this edition: a reader-friendly format with second color and additional illustrations and anecdotes; more case examples for integrating the model into practice; a discussion of the therapy process and how change occurs; language linked to UT and ICDH-2 terminology; a research chapter; and numerous research references highlighting the growing body of evidence supporting MOHO.

Manual focusing on documenting the occupational therapy process. Each skill is broken down into small steps and taught individually. Includes a template for writing problems, goals, and each section of the SOAP note. Also includes practice worksheets and detachable checklist and summary.

Advanced therapies and technologies, new service delivery methods, and care upgrades in underserved areas are translating into improved quality of life for millions with disabilities. Occupational therapy parallels this progress at the individual level, balancing short-term recovery and adaptation with long-term independence and well-being. This Second Edition of the International Handbook of Occupational Therapy Interventions builds on its ground-breaking predecessor by modelling current clinical standards rooted in scientific evidence-based practice. Its interventions are applied to a diverse range of client disabilities, with many new or rewritten chapters on workplace and vehicle accommodations, smart home technologies, end-of-life planning, and other salient topics. New introductory chapters spotlight core competencies in the field, from assessing client needs and choosing appropriate interventions to evaluating programs and weighing priorities. And for increased educational value, interactive case studies allow readers an extra avenue for honing clinical reasoning and decision-making skills. Of particular note is a new chapter providing a taxonomy—the Occupational Therapy Intervention Framework—and a validation study of its categories and concepts, delineating the occupational therapist’s roles and the expected outcomes. Intervention areas featured in the Handbook include: ● Adaptive interventions, OTs manage and facilitate clients’ adaptations. ● Learning interventions, OTs teach and the clients learn or relearn. ● Enabling interventions, OTs enable clients to be meaningfully occupied. ● Preventing interventions, OTs prevent ill-health and promote clients’ ability to sustain health in daily life. The Second Edition of the International Handbook of Occupational Therapy Interventions is career-affirming reading for all members of rehabilitation teams, including occupational and physical therapists and rehabilitation nurses. Students intending to enter this growing field and professionals working toward its continued improvement will find it useful and inspiring.

This new book presents the growing occupational therapy knowledge and clinical practice. Occupational therapy, as a health profession, is concerned with preserving well-being through occupations, and its main goal is to help people participate in the activities of daily living. This is achieved by working with people to improve their ability to engage in the occupations they want to engage in or by changing the occupation or the environment to better support their occupational engagement. The topic of the book has been structured on occupational therapy framework and reflects new research, techniques, and occupational therapy trends. This useful book will help students, occupational therapy educators, and professionals to connect occupational therapy theories and the evidence-based clinical practice.

The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research--the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study.

Developed to help occupational therapists learn to use the COPM. Provides a self-directed program which allows learning at your own pace, links reference materials in a step-by-step fashion, and demonstrates examples and clinical scenarios.
