Now firmly established as one of the leading economics principles texts in the UK and Europe, this exciting new fourth edition of Economics by N. Gregory Mankiw (Harvard University) and Mark P. Taylor (Washington University), has been fully updated. New topics have been added in including theories on, for example, Marxist and Feminist theories on labour giving wider context to economic issues. A new chapter on Issues in Financial markets has been added covering the financial crisis and its causes and the final chapter has been updated to reflect the post-crisis world and how theories of the crisis have emerged.

This popular textbook provides a comprehensive but accessible coverage of health economic principles and applications. It provides an introduction for those with no previous knowledge of economics, but also more advanced material suitable for those with a background in economics. Now into its second edition, Barbara McPake and Charles Normand have incorporated developments in economic evaluation and economics of health systems from recent research and experience while retaining an accessible approach and style. The book starts with a section on basic economic principles as applied to health and health care, and goes on to discuss economic evaluation in health care, the economics of health systems and health care finance. Examples and illustrations are taken from a wide range of settings and world regions, reflecting the authors' belief that the same principles apply, and that it is useful to have some understanding of how different countries organise the health system. It provides an understanding of the performance of different health systems from the insurance based approaches in the United States to government funding that is common in Canada and most countries in Europe, and the mixed systems that operate in most low-income countries. This book is ideal for students in public health and related courses, for health care professionals and those studying health economics at a more advanced level.

This South African edition of Microeconomics is essential reading for all students taking introductory economics modules on undergraduate courses throughout South Africa. It is also ideal for use with the microeconomics component of MBA courses. The text contains updated case studies, set against a South African context to illustrate how the principles of economics relate to your life. The news articles are based on news events in South Africa along with questions to help you apply your knowledge and to build your understanding. This text is designed to give you the confidence and ability to think like an economist.

Principles of Microeconomics 2e covers the scope and sequence of most introductory microeconomics courses. The text includes many current examples, which are handled in a politically equitable way. The outcome is a balanced approach to the theory and application of economics concepts. The second edition has been thoroughly revised to increase clarity, update data and current event impacts, and incorporate the feedback from many reviewers and adopters. The text and images in this book are grayscale. The first (previous) edition of Principles of Microeconomics via OpenStax is available via ISBN 9781680920093.
