In Protocol, Alexander Galloway argues that the founding principle of the Net is control, not freedom, and that the controlling power lies in the technical protocols that make network connections (and disconnections) possible. He does this by treating the computer as a textual medium that is based on a technological language, code.

Computer networks—Security measures. 2. Computer networks—Management. 3. Computer network protocols. 4. Electronic data processing—Distributed processing. I. Title II.

~~Protocol: How Control Exists after
Decentralization ...~~

Protocol is based on a contradiction between two opposing technologies: one radically distributes control into autonomous locales, and the other focuses control into rigidly defined hierarchies. I argue that the tension between these two technologies creates the conditions of existence of protological control.
