In automation: Manufacturing applications of automation and robotics Flexible automation is an extension of programmable automation. The disadvantage with programmable automation is the time required to reprogram and change over the production equipment for each batch of new product. This is lost production time, which is expensive.

Within industrial automation, robots are used as a flexible way to automate a physical task or process. Collaborative robots are designed to carry out the task in the same way a human would. More traditional industrial robots tend to carry out the task more efficiently than a human would. Robots That Are Not Automation

A numerical-control machine tool is a good example of programmable automation. The program is coded in computer memory for each different product style, and the machine tool is controlled by the computer program. Industrial robots are another example. Flexible automation is an extension of programmable automation.
