Java | Oracle
Java Version 1.8.0_25 from Oracle Corporation or Java Version 1.7.0_67 from Oracle Corporation or Java Version 1.6.0_45 from Sun Microsystems Inc. or Java Version 1.6.0_33 from Apple Inc. Version number translation: 1.6.0_34 is, in English, Java 6 Update 34 The initial "1" is ignored as is the third digit. Ask Oracle why.

Java Tester - What Version of Java Are You Running?
Java applets can, optionally, be digitally signed. Those that are not, started generating a new pop-up warning with the introduction of Java 7 Update 11. The "version" applet on this site is not signed. Neither are those from Oracle that test if Java is working (here and here). Finally, you may see Oracle mention the Java security baseline.

Java Tester - Home Page
If your Java is working correctly, and the test finds no out-of-date Java versions, you will see the following notification accompanied by information about your Java installation and your computer: If your Java is not working properly, the Test Java page displays additional configuration options that you may need to check, as well as download ...

How to test Java on your computer | Tech Help KB

3 Ways to Check Your Java Version in the Windows Command Line
JavaScript Tester. Okay, this page doesn't belong on this website. And, for the first few years it wasn't here. Why? JavaScript has nothing to do with Java. For the most part. They are, however, both programming languages and their names start with the same four letters. But that's it.

JavaScript Tester at Java Tester Website
March 5, 2013. After the release of Java 6 Update 43, I tested again. The top tester page now initially warns that "An old version of Java has been detected on your system." But, when I clicked on the "test the currently installed version of Java" link, it reported "Latest Java installed". The bottom tester page now invokes a signed Java applet ...
