Bees are our most important pollinators and they are in decline worldwide. They love to live in urban environments, where it's a short flight path from one type of plant to the next. But conventional gardens that favour lawns and pesticides over flowers and edible plants are scaring the good bugs away. The Bee-Friendly Garden is a guide for all gardeners great and small to encouraging bees and other good bugs to your green space. Includes: - How bees forage and why your garden needs them - A comprehensive plant guide to bee-friendly plants - Simple changes anybody can make - Ideas for gardens of all sizes - Natural pest control and companion planting advice

For many people gardening is predominantly about plants and choosing the right combination and balance to make beautiful borders. This book will help you achieve this - and more, because it will also help you create an ecologically sound, bee-friendly garden, showing that you can have an aesthetically pleasing garden full of beautiful flowers which at the same time will attract and nurture bees. It will enable you to select bee-friendly plants, and to plan borders which are beneficial to bees, encouraging these most valuable of insects to come to your garden over and over again, both for sustenance and to aid pollination. It contains a wide range of practical, beautiful and easy-to-follow planting plans for bee-friendly gardens of all sizes, including: - Traditional mixed, cottage, and colour-themed borders - 'Designer' and 'natural' borders - Borders for acid and alkaline soils - Ideas for container planting This book will be of interest to every gardener who cares for the plight of the honeybee and other bees.

For every gardener who cares about the planet, this guide to designing a bee garden helps you create a stunningly colorful, vibrant, healthy habitat that attracts both honeybees and native bees. In The Bee-Friendly Garden, award-winning garden designer Kate Frey and bee expert Gretchen LeBuhn provide everything you need to know to create a dazzling garden that helps both the threatened honeybee and our own native bees. No matter how small or large your space, and regardless of whether you live in the city, suburbs, or country, just a few simple changes to your garden can fight the effects of colony collapse disorder and the worldwide decline in bee population that threatens our global food chain. There are many personal benefits of having a bee garden as well! Bee gardens: - contain a gorgeous variety of flowers - bloom continuously throughout the seasons - are organic, pesticide-free, and ecologically sustainable - develop healthy and fertile soil - attract birds, butterflies, and other beneficial insects - increase the quantity of your fruit and vegetable harvest - improve the quality, flavor, and size of your produce Illustrated with spectacular full-color photos, The Bee-Friendly Garden debunks myths about bees, explains seasonal flower progression, and provides detailed instructions for nest boxes and water features. From "super blooming" flowers to regional plant lists and plants to avoid, The Bee-Friendly Garden is an essential tool for every gardener who cares about the planet and wants to make their yard a welcoming habitat for nature's most productive pollinator.

Bees play a vital and irreplaceable role in pollinating our flowers, fruits and vegetables. The more bees in your garden the healthier, more productive and more pleasant a place it will be. Yet bees are declining rapidly and many people, even if they do not wish to keep bees themselves, are asking what can be done on an individual basis to help the bee. This book is a response to that request. It will demonstrate in one accessible volume how each of us can play our part in providing a bee-friendly environment, no matter how much gardening space and/or time we may have. It includes: - How bees forage, what bees you can expect to find in your garden and what plants are best for them. - Why honey bees are so important; what they need to thrive and how they detect and access those requirements; and what varieties of plants are best suited to provide those needs. - How the gardener can offer and maintain a bee-friendly garden, followed by a season-by-season account of what bee-friendly plants are in flower and when, and what jobs the gardener can be doing during these times to help bees thrive. - A 'gazetteer' of selected bee-friendly plants, arranged by type of plant in seasonal sub-sections. - Illustrative, practical planting plans, including a culinary herb garden, a potager, a wild flower garden, and a '3 seasons' traditional border.

Want to do your part in helping your local pollinators flourish? Pollinator-Friendly Gardening makes it easy. Are you interested in growing a naturally healthy garden? How about making sure your local environment helps bees, butterflies, and birds survive and thrive? If you are a beekeeper, are you looking for the ideal plants to keep your colony happy? Pollinators such as monarch butterflies and bees are under threat, and more and more gardeners want to do all they can to create a hospitable space for them. That's where Pollinator-Friendly Gardening comes in. It identifies the most visible and beloved pollinators: bees, butterflies, and hummingbirds, as well as some more unlikely candidates such as ants, wasps, and beetles. It then explains the intriguing synergy between plants and pollinators. This vital information makes it a unique sourcebook to share the ways that anyone can make a yard a more friendly place for pollinators. Plant selection, hardscape choices, habitat building (both natural and manmade), and growing practices that give pollinators their best chance in the garden are all covered in detail. Plant lists organized by category, helpful tips, and expert spotlights make it a fun and easy book to read too.

A recent Stenlake acquisition, this is an ideal book for gardeners who want to encourage pollinating insects, this guide helps you choose plants that bees will love, such as lavender and hollyhock, and provides the information you need to plant and maintain a beautiful garden.

The passion and urgency that inspired WWI and WWII Victory Gardens is needed today to meet another threat to our food supply and our environment—the steep decline of pollinators. The Pollinator Victory Garden offers practical solutions for winning the war against the demise of these essential animals. Pollinators are critical to our food supply and responsible for the pollination of the vast majority of all flowering plants on our planet. Pollinators include not just bees, but many different types of animals, including insects and mammals. Beetles, bats, birds, butterflies, moths, flies, and wasps can be pollinators. But, many pollinators are in trouble, and the reality is that most of our landscapes have little to offer them. Our residential and commercial landscapes are filled with vast green pollinator deserts, better known as lawns. These monotonous green expanses are ecological wastelands for bees and other pollinators. With The Pollinator Victory Garden, you can give pollinators a fighting chance. Learn how to transition your landscape into a pollinator haven by creating a habitat that includes pollinator nutrition, larval host plants for butterflies and moths, and areas for egg laying, nesting, sheltering, overwintering, resting, and warming. Find a wealth of information to support pollinators while improving the environment around you: • The importance of pollinators and the specific threats to their survival• How to provide food for pollinators using native perennials, trees, and shrubs that bloom in succession• Detailed profiles of the major pollinator types and how to attract and support each one• Tips for creating and growing a Pollinator Victory Garden, including site assessment, planning, and planting goals• Project ideas like pollinator islands, enriched landscape edges, revamped foundation plantings, meadowscapes, and other pollinator-friendly lawn alternatives The time is right for a new gardening movement. Every yard, community garden, rooftop, porch, patio, commercial, and municipal landscape can help to win the war against pollinator decline with The Pollinator Victory Garden.
